DriverPass System Analysis

Christopher Wright

System Requirements
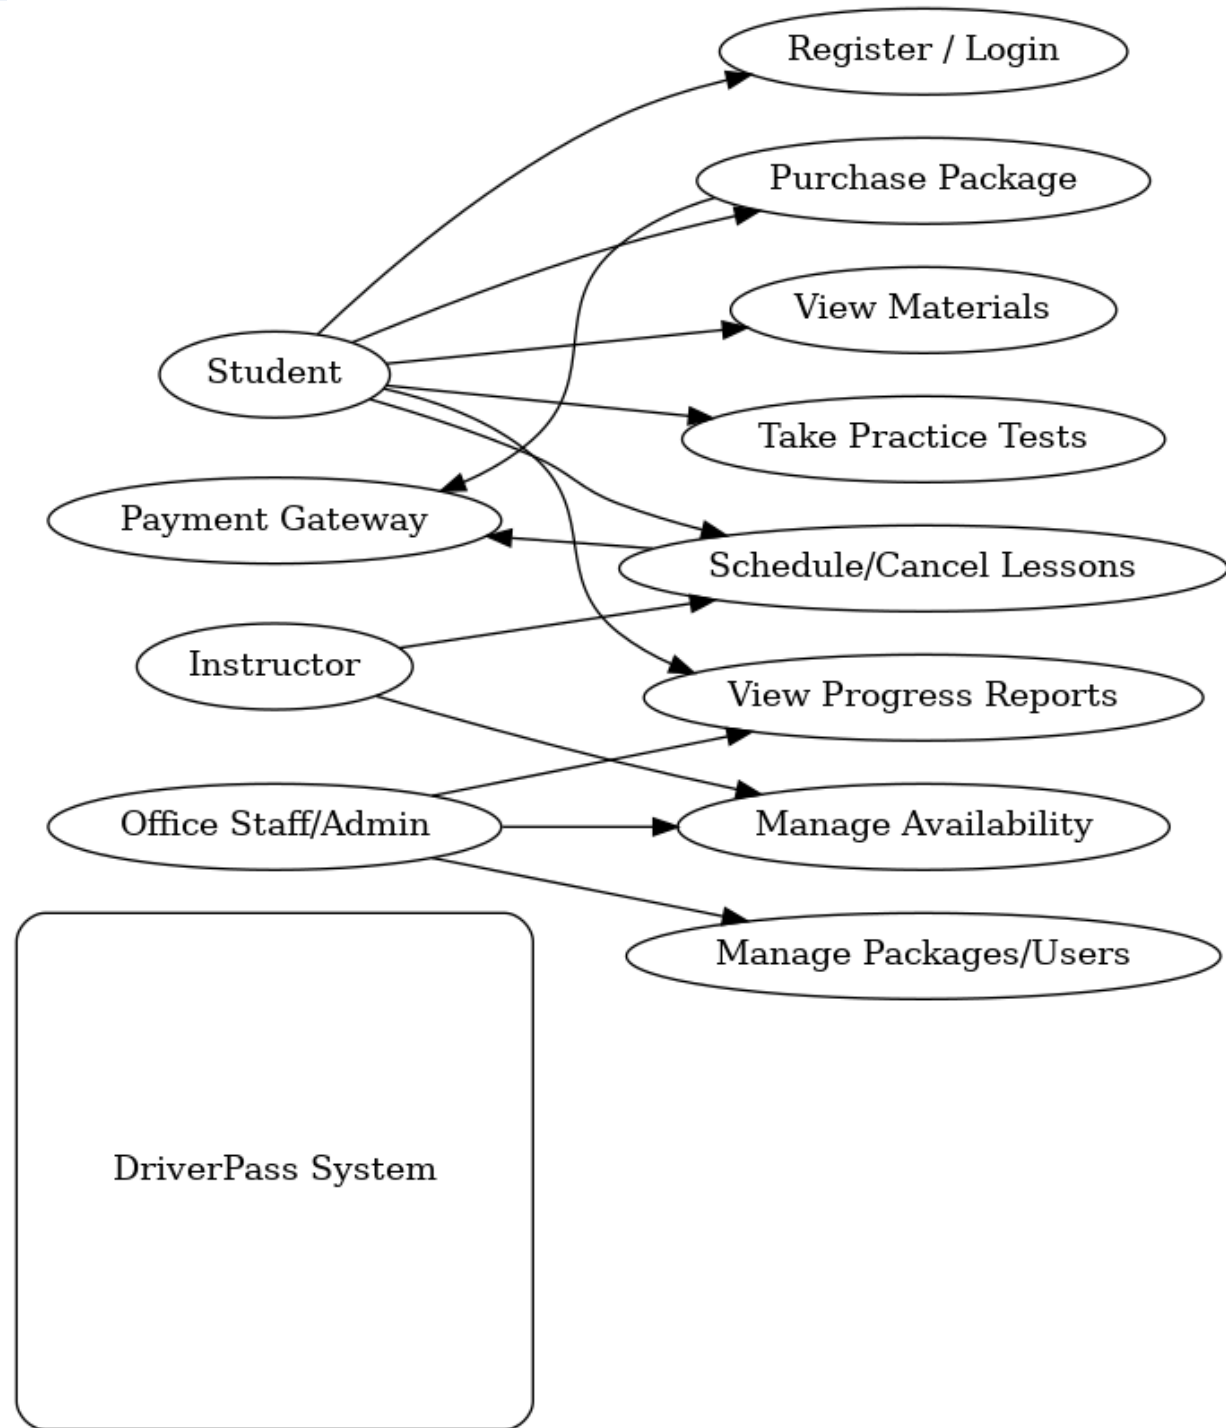

Functional Requirements:

- Students can schedule, cancel, and reschedule in-car driving lessons.

- Students can take practice tests with immediate scoring and progress tracking.

Nonfunctional Requirements:

- Secure HTTPS communication for all data transfers.

- WCAG 2.1 AA accessibility compliance for mobile and desktop users.

Use Case Diagram

Activity Diagram

Security

- HTTPS encryption for all client-server communication.

- Role-based access control (RBAC) for Students, Instructors, and Admins.

- Password hashing (bcrypt/Argon2) and email verification for accounts.

- PCI-DSS compliance for payment processing (no card data stored).

System Limitations

- Requires internet connection for all features.

- Limited to service areas set by administrators for in-car lessons.

- No offline practice test support in the current version.

- Initial scalability target: up to 10,000 active users.
